

TOTE DUMP

Material Handling

The Layton Systems Tote Dump handles a variety of totes sizes for different methods of material handling. Common versions include a basic lift, lift and dump into a hopper, or anything in between.

Efficient and reliable Tote Handling

Features

- Handles totes for bulk materials
- Hydraulically operated
- Stainless steel construction
- Floor mounted or elevated on frame
- Guarding as requested
- Additional safety features available such as front light curtain
- Local operation at frame mounted control panel
- Two handed operation for operator safety
- Custom configurations available

Layton Systems offer a wide variety of tote dumpers from basic stand alone units to our lift and seal dumper that contains all of the product in the dump hopper. We have manufactured multiple dumpers integrated to mixed vegetable blending lines and roll-back dumpers to feed scale hoppers. We also fabricate Lift & Dump units that elevate the tote before dumping. These units feature an integral hydraulic fluid reservoir that allows for easy maintenance.

Simple Design for minimal maintenance
minimal part and low downtime.

Stainless steel drives for Improved
reliability and control.
