

BLENDING AND SEASONING SYSTEMS

The Layton Systems Blending and Seasoning Systems are engineered to deliver precise, consistent, and efficient blending and seasoning of products, making them an essential component in food processing operations. These systems are designed to handle a wide range of products and seasonings, ensuring uniform distribution and optimal flavor across every batch.

Designed to Minimize Product Buildup

Features

Watch
the
Video

- **Uniform Blending and Seasoning:** The systems ensure that all ingredients are thoroughly mixed, providing consistent product quality with every batch. This uniformity is crucial for maintaining the taste and texture that customers expect
- **Accurate Seasoning Application:** Layton's Blending and Seasoning Systems are equipped with advanced dispensing mechanisms that allow for precise control over the amount of seasoning applied, reducing waste and ensuring each product is perfectly seasoned
- **Versatility:** These systems are capable of handling various product types and sizes, making them ideal for a wide range of food products, including snacks, cereals, nuts, and more
- **Hygienic Design:** Constructed with easy-to-clean materials and designed to minimize product buildup, these systems meet the highest standards of food safety and sanitation, reducing the risk of contamination
- **Scalable Solutions:** Layton Systems offers scalable solutions that can be customized to fit the specific needs of your production line, whether you're running a small operation or a large-scale facility
- **"Scarf" Spreading Feeders:** For Band Feeding, Seasoning, & Blending
- **Oiler Systems:** Integrated into the Drum Assembly or optional Oil Pump Skid to generate consistent spray patterns and a spray bar with nozzles and air lines for controlled, low-volume oil dispersion

Applications

- **Snack Foods:** Ideal for seasoning chips, pretzels, popcorn, and other snack foods where even seasoning distribution is critical
- **Cost Efficiency:** With precise control over ingredient usage and minimal waste, these systems contribute to lower production costs & higher profitability
- **Operational Efficiency:** The systems are designed for ease of use, reducing downtime and allowing for faster production cycles

Uniform blending with every batch
