

DRUM ASSEMBLY

Layton's cutting-edge Drum Assemblies are engineered to enhance operational efficiency and deliver consistent, high-quality product coverage, helping you achieve flavor perfection. We offer both plastic and stainless-steel drums in standard and custom sizes, with diameters and lengths tailored to achieve the production rates of your application. Our drum designs are the result of extensive research and development, including hands-on testing with a wide variety of products.

This process has allowed us to fine-tune flight angles and configurations for optimal product turnover, even seasoning distribution, and minimal breakage. Built to the highest standards, our drum assemblies provide smooth, reliable performance in demanding, high-volume environments—minimizing downtime and maximizing throughput.

Adjustable, Economical, Durable & Safe

Features

- Continuous Formed Sanitary Lifting Flights
- Adjustable Discharge Angle For Product Dwell Time
- Various Drum Diameters to Match Capacity
- Round Tube Sanitary Frame
- Positive Trunion Drive System
- Locking Castors for Mobility
- Safety Pull Cord
- Covered opening with vacuum ports for dust removal
- 208/230/460 Volt 3 Phase 60 Hertz VFD Drives

Uniform blending with every batch
